# The Ins and Outs of Population Change

ost everyone is familiar with the decennial census, which is conducted every ten years. The head count of the country's population is required by the Constitution to determine the number of Representatives each state will have in Congress. But did you know that the U.S. Census Bureau estimates population for all the years in between as well?

The Census Bureau starts with the decennial census head count, then uses a variety of data—such as birth and death records, federal income tax returns, Medicare enrollment, and immigration records¹—to estimate changes. Population is estimated as of July 1 each year. The most recent estimates include total changes in population from the April 2000 census through July 2007.

Every year, the Census Bureau estimates population for every county in each state. This county-level data is then adjusted so that the sum of county population adds up to the national total, which is estimated separately. For New Hampshire, total population change, the difference in population from April 2000 to July 2007, was estimated at 80,042.

Two contributing factors to population change are *natural increase* and *net migration*. *Natural increase* is simply the number of births minus the number of deaths during the specified time period. Positive natural increase means there were more births than deaths. Negative natural increase indicates more deaths than births. The natural increase of New Hampshire's population was 35,461 from April 2000 to July 2007. This included 107,694 births and 72,233 deaths.

The second measure, *net migration*, is the difference between people moving into a specific geographic area and people moving out of the same area during the specified time period. This measure is also broken into two parts. Migration that crosses national borders is defined as international *migration*. International migration data includes both native and foreignborn populations. It is determined by: the net international migration of the foreign born; the net migration between the United States and Puerto Rico; the net migration of natives to and from the United States; and the net overseas movement of the Armed Forces population.<sup>2</sup> Net international migration for New Hampshire totaled 13,928 more in July 2007 than April 2000.

<sup>&</sup>quot;Terms & Definitions – Population Estimates: Concepts." U.S. Census Bureau, Population Division, Accessed May 22, 2008. <www.census.gov/popest/topics/terms/>

<sup>&</sup>lt;sup>2</sup> "Table 4: Cumulative Estimates of the Components of Population Change for Counties of New Hampshire: April 1, 2000 to July 1, 2007 (CO-EST2007-04-33)," released March 20, 2008. U.S. Census Bureau, Population Division, Accessed May 27, 2008. <a href="https://www.census.gov/popest/counties/CO-EST2007-04.html">www.census.gov/popest/counties/CO-EST2007-04.html</a>

The other part of migration is movement entirely within the United States, known as *internal* or *domestic migration*. Internal in- and out-migration consist of moves where both the origin and the destination are within the United States (excluding Puerto Rico).<sup>3</sup> Net internal migration between April 2000 and July 2007 in New Hampshire was 35,682. This number includes people who moved from one New Hampshire county to another New Hampshire county, and not just those who in-migrated from or out-migrated to another state. Internal migration data measures population moving in or out of a specific area, but does not make any assumptions as to where those people either came from or went to.

#### County population change

More than half of the total population change for New Hampshire over the April 2000 to July 2007 period can be attributed to population increase in two counties: Hillsborough and Rockingham.

Hillsborough, the state's most populous county, added 21,459 people, the most new residents among the counties since the 2000 Census. Natural increase contributed most of that growth, adding a net total of 16,608 residents. Hillsborough County had the highest number of both births and deaths during this time. While experiencing the highest amount of international net migration among the counties, adding 8,717 residents, Hillsborough County also

#### **About Census Population Estimates**

According to the Constitution, the population must be enumerated every ten years for the purpose of apportioning members of the U.S. House of Representatives among the states.<sup>4</sup> Under Title 13 of the U.S. Code, estimates are used as a basis for allocating federal funds to states, counties, and local units of government. Estimates are also used in the calculation of per capita data in economic statistics.

Decennial census data are based on an actual head count of persons living in the United States. Annually, between census years, the U.S. Census Bureau estimates residential population, and also revises data for all years back to the last decennial census. The latest estimates, released in March 2008, were for the period ending July 1, 2007.

had the only decline in net internal migration, with 2,238 residents leaving the county.

Rockingham County had slightly lower growth than Hillsborough since the 2000 Census, adding 11,176 residents through natural increase and 9,204 residents through net migration. Rockingham County held the second-highest total in every population growth factor—births, deaths, net internal migration, and net international migration.

Merrimack County held the largest share of net migration among the counties, adding 9,921 new residents. This growth was fueled by the highest net internal migration, an increase of 8,874 residents. Net international migration contributed 1,047 residents. Natural increase contributed a smaller share of growth for Merrimack County, adding 2,605 residents. Strafford County ranked third in natural increase (3,995) and net internal migration (5,007).

Between April 2000 and July 2007, Coös County was the only county to decrease in total population,

dropping by 339 residents. Though very small, both net internal migration and net international migration were positive, with a net migration of 633 residents. The biggest influence on population change was a higher number of deaths than births, resulting in natural increase of –850. Carroll County was the only other county with more deaths than births, with a natural increase of –362. In Carroll County, however, that decrease was offset by net migration of 4,249.

Four counties had relatively low natural increase, with the difference between births and deaths less than 1,000: Belknap (58), Cheshire (824), Grafton (849), and Sullivan (558). All of these counties had a substantially higher share of net migration from net internal migration than from net international migration. Sullivan County held the second-lowest net migration total, increasing by 1,835 residents; only Coös County had less net migration.

## Change in Nonfarm Employment

April 07 - April 08

## Monthly Analysis of Current Employment Statistics (CES) Data

For further analysis please read the *Detailed Monthly*Analysis of Industry Employment Data on our Web site at <a href="https://www.nh.gov/nhes/elmi/nonfarm.htm">www.nh.gov/nhes/elmi/nonfarm.htm</a>

#### Seasonally Adjusted:

Preliminary seasonally adjusted estimates for April 2008 showed that New Hampshire employers added 1,200 jobs to payrolls in the state.

With a 700-job increase, professional and business services (supersector 60) proved to be the largest contributor to the state's employment gain during the month. Education and health services (supersector 65) followed with 400 added jobs, and manufacturing (supersector 30) and leisure and hospitality (supersector 70) each expanded their ranks by 200 jobs. Concluding the list of additions,

trade, transportation, and utilities (supersector 40) and financial activities (supersector 55) each employed 100 additional persons.

On the other side of the ledger for April, information (supersector 50) trimmed 200 jobs from its rolls, and construction (supersector 20), other services (supersector 80), and government (supersector 90) each reduced their force by 100 jobs.

#### Unadjusted:

April's unadjusted employment estimates showed a seasonal upturn with a 6,500-job gain. Professional

#### Average Earnings and Hours of Production Workers in Manufacturing

	Average Weekly Earnings			Average	Weekly Hou	ırs	Average Hourly Earnings			
	Apr-08	Apr-08 Mar-08 Apr-07		Apr-08	Mar-08	Apr-07	Apr-08	Mar-08	Apr-07	
Sector	preliminary	revised		preliminary	revised		preliminary	revised		
New Hampshire										
All Manufacturing	\$680.12	\$683.20	\$683.60	39.2	39.4	40.0	\$17.35	\$17.34	\$17.09	
Durable Goods	\$704.16	\$704.85	\$721.76	40.1	40.3	41.6	\$17.56	\$17.49	\$17.35	
Nondurable Goods	\$605.90	\$611.52	\$560.28	36.5	36.4	34.8	\$16.60	\$16.80	\$16.10	

and business services (supersector 60) supplied 2,300 jobs to that total. Next came construction (supersector 20) with a 1,600-job increase, and trade, transportation, and utilities (supersector 40) followed with a 1,300 job expansion. Elsewhere, leisure and hospitality (supersector 70) put 500 more workers on the books. Education and health services (supersector 65) bumped up its job total by 400 in April. To wrap up activity for April in the plus column, manufacturing (supersector 30) enlarged its force by 300 jobs, and financial activities (supersector 55) augmented its staff with 200 extra positions.

Natural resources and mining (supersector 10), information (supersector 80), and other services (supersector 80) showed no changes in employment totals from the previous month's levels.

Government (supersector 90) reduced its total number of jobs by 100 to finish the list of the month's employment shifts.

#### Recent New Hampshire Economic Trends: Venture Capital Makes a Comeback in 2007

Slideshow

Updated information on venture capital investments is now available in a brief slideshow on the ELMI web site. Venture capital is equity funding provided to fast-growing entrepreneurial companies by professional investors. This slideshow highlights recent trends in venture capital investment for New Hampshire and the New England region.

To view the slideshow, go to <www.nh.gov/nhes/elmi> and click on "Venture Capital Slideshow" under the "What's New" section.

#### **Business Employment Dynamics**

PDF

The latest release of quarterly Business Employment Dynamics data is now available. The Business Employment Dynamics contain information on quarterly gross job gains and gross job losses. Gross job gains and gross job losses reveal aspects of business dynamics that underlie the net employment changes that are reported in monthly nonfarm estimates and in quarterly covered employment and wages (QCEW) data. This latest analysis is for the quarter ending September 2007.
