New Hampshire Economic Conditions June 2013

New Hampshire Population: Where Do We Rank?

The 2010 Census population count for New Hampshire was 1,316,470, a 6.7 percent increase over the 2000 count of 1,235,786. This was a modest increase, and the lowest percent change for New Hampshire since 1940, when population increased by 5.6 percent over 1930. While total population continues to grow, the amount of growth has slowed sharply over the last three Censuses.

New Hampshire's rate of growth ranked 32nd among the states. The other New England states grew more slowly than New Hampshire, and all were well below the United States percent change of 9.7 percent. The fastest growing states were Nevada (35.1 percent) and Arizona (24.6 percent). Michigan (-0.6 percent) was the only state to lose population from 2000 to 2010.

2000-2010 Percent
Change in Population,
New England States

	Percent Change	Rank (Inc. DC)
Connecticut	4.9%	36
Maine	4.2%	40
Massachusetts	3.1%	44
New Hampshire	6.5%	32
Rhode Island	0.4%	50
Vermont	2.8%	45

Components of Population Change

A decade is a relatively long time frame, masking a faster growth in the first couple of years to a near standstill by the end of the decade. Between the decennial Censuses, the US Census Bureau annually estimates *Components of Population Change*. The components measure changes in population due to natural increase (births minus deaths) and migration. Migration can be international, people moving in/out of the state from/to other countries, or domestic, people moving in/out of the state from/to other states.

In 2001, the state's annual rate of population growth was 1.6 percent. By 2007, the state's rate of population growth had dropped to a meager 0.3 percent annually; and in 2009, the rate fell to 0.2 percent. The main reason for the gain in the beginning of the last decade was domestic migration. But from 2007 to 2009, domestic migration turned negative, meaning more residents moved out of New Hampshire to another state than moved into New Hampshire from another state. Net natural increase and international migration remained positive throughout the decade.

New Hampshire Population, 2000-2010

New Hampshire Components of Population Change, 2000-2009

Population by Age

New Hampshire continues to grow older as the baby boom generation maintains its dominant share of the population. In 1980, the two age groups with the largest population were 15 to 19 years and 20 to 24 years of age. By 2010, the two age groups with the largest population were 45 to 49 years and 50 to 54 years of age. A similar, smaller bump represents the echo boom generation, also known as Gen Xers. Over the last four Censuses, the numbers of those age 70 and older have had a common pattern of decrease, but with each consecutive Census there are slightly more people in each cohort.

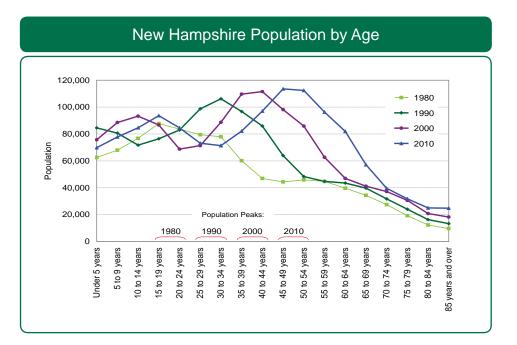

With the aging of the baby boom generation, it is inevitable that the median age of New Hampshire residents continues to rise. As of the 2010 Census, New Hampshire's median age was 41.1 years, the fourth highest median age among the 50 states and the District of Columbia. All six New England states are in the top ten for median age. Only three states outside New England have median ages over 40: Pennsylvania (40.1 years), Florida (40.7 years) and West Virginia (41.3 years).

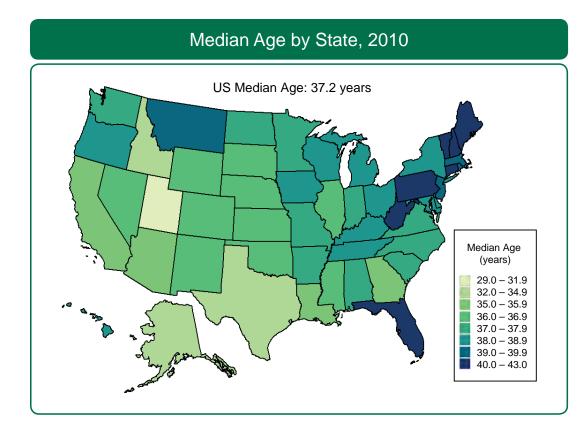

Utah continues its reign as the youngest state, with a median age of 29.2 years. It was the only state in 2010 with a median age below 30 years. The next youngest states were Texas (33.6 years) and Alaska (33.8 years); the District of Columbia also had a median age of 33.8 years. The 2010 median age for all US residents was 37.2 years.

Population by Race

New Hampshire gained population in all race and ethnic categories from 2000 to 2010. Though the numbers of minority population are still relatively small, the state ranked second highest among all states and the District of Columbia in the percent change of minority population. The state's minority population — which includes all those reporting ethnicity and race as something other than *non-Hispanic* White alone — grew from 4.9 percent to 7.7 percent, a 67.5 percent increase over the ten-year period. New Hampshire had 101,420 minority residents in 2010, compared to 60,534 in 2000.

New Hampshire's population was 92.3 percent *non-Hispanic White only*, compared to the nation at 63.7 percent. From 2000 to 2010, the state's minor-

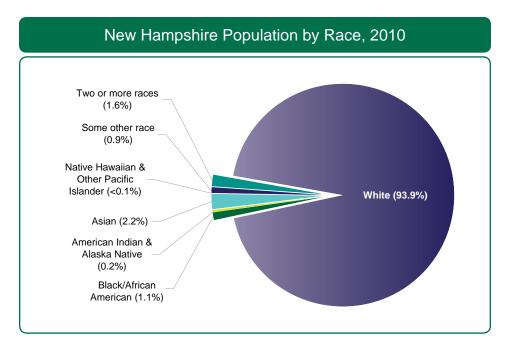

ity population increased by 40,886 residents, edging out the increase in *non-Hispanic White alone* population of 39,798 residents.

When breaking out New Hampshire's population by race, the highest share among minorities of one race is *Asian*, followed by those who are *Black or African Americans*. Those who are *Two or more races* represent 1.6 percent of the total population. The share of total population of Hispanic or Latino ethnicity, regardless of race, was 2.8 percent in 2010. Though not a large share of the population, the number of Hispanic residents in the state increased by 79.1 percent over 2000.

Nevada had the highest percent change in minority population, increasing by 78.1 percent to 1.2 million. Only the District of Columbia lost minority population, decreasing by 5 percent. Overall, Hawaii, whose residents are largely *Native Hawaiian* *and other Pacific Islanders*, held the largest share of minority population in 2010 at 77.3 percent, followed by the District of Columbia (65.5 percent), California (59.9 percent), and

New Mexico (59.5 percent). Maine has the lowest share of minority population (5.6 percent), followed by Vermont (5.7 percent) and West Virginia (6.8 percent).

New Hampshire unemployment and labor force estimates are calculated using a regression model which depends on Current Population Survey (CPS) estimates. Labor Market Area estimates are calculated using the Bureau of Labor Statistics "Handbook Method" and then adjusted to the State levels.

Monthly Analysis of Current Employment Statistics (CES)

Seasonally Adjusted

New Hampshire's preliminary seasonally adjusted employment gained 700 jobs from February 2011 to March 2011. Leading the gains were private education and health services (supersector 65), and leisure and hospitality (supersector 70). These grew by 900 and 600 jobs respectively. Trade, transportation, and utilities (supersector 40) grew by 500 jobs from February to March while jobs in other services (supersector 80) increased by 300 overthe-month. Employers in manufacturing (supersector 30), specifically nondurable goods, added 100 jobs from February to March. Over-the-month employment in both construction (supersector 20) and government (supersector 90) was flat. Professional and business services (supersector 60) decreased by 1,300 jobs over-the-month. Employment in financial activities (supersector 55) dropped by 400, while information (supersector 50) lost 100 jobs.

From March 2010 to March 2011 preliminary seasonally adjusted employment grew by 6,700 jobs. Leading this growth was professional and business services and leisure and hospitality, each with an increase of 5,300 jobs over-the-year. Employment in private education and health services increased by 3,000, and manufacturing gained 1,500 jobs from March 2010 to March 2011.

Employers in trade, transportation, and utilities decreased their employment by 3,600 jobs between March 2010 and March 2011. Retail trade claimed nearly seventy percent of this drop, down 2,400 jobs. Over-the-year, other services lost 1,800 jobs, while employment in construction and government declined by 1,500 and 1,100 jobs, respectively. Information reported 300 fewer jobs in March 2011 than in March 2010, and financial activities reported 100 fewer jobs over-the-year.

Unadjusted

Preliminary not seasonally adjusted employment increased by 300 jobs from February to March. Government (supersector 90) showed the largest employment increase, up 700 jobs. Private education and health services (supersector 65) recorded a gain of 600 jobs. Trade, transportation, and utilities (supersector 40), and construction (supersector 20), expanded their workforce by 500 jobs each over-the-month. Jobs in other services (supersector 80) grew by 200 from February to March, and employment in mining and logging (supersector 10), and leisure and hospitality, each increased by 100 jobs.

The largest employment decrease from February to March was in the professional and business services industries (supersector 60), with a loss of 1,700 jobs. Employment in financial activities (supersector 55) dropped by 400. Information employment contracted by 100 over-the-month.

From March 2010 to March 2011 employment increased by 7,100 jobs in New Hampshire. The leisure and hospitality supersector experienced the largest growth over-the-year, with an increase of 5,800 jobs. Professional and business services employment grew by 5,200 from March 2010 to March 2011. Employment in private education and health services increased by 2,800 over-the-year. Manufacturing employers upped their workforces by 1,100 from March 2010 to March 2011. Employment in both mining and logging, and in financial activities remained unchanged over-the year.

Several industrial sectors reported employment decreases from March 2010 to March 2011, with the largest, a decrease of 3,000, in trade, transportation, and utilities. Jobs in other services dropped by 2,000 over-the-year. Government dropped 1,500 jobs from March 2010 to March 2011. Construction employment decreased by 1,000 workers from March 2010 to March 2011, and employment in information fell by 300 jobs over-the-year.
