Multiple Jobholders in New Hampshire 2009

How many New Hampshire residents have more than one job?

In 2009, there were roughly 49,000 New Hampshire residents who were working more than one job. This equated to about 7.0 percent of the state's 692,000 employed residents, age 16 and over. These estimates are based on New Hampshire data from the Current Population Survey, a nationwide survey of about 60,000 households selected to represent the U.S. population 16 years and older. The survey is conducted monthly by the Census Bureau for the Bureau of Labor Statistics (BLS). According to BLS, multiple jobholders are wage or salary workers who hold two or more jobs, self-employed workers who also hold a wage or salary job, or unpaid family workers who also hold a wage or salary job.

What has been the trend of multiple jobholding in New Hampshire?

Since 1999, the multiple jobholding rate in New Hampshire has fluctuated within a range of approximately one percentage point, from a low of 6.2 percent in 2003 to a high of 7.3 percent in 2006. While year-to-year changes are usually small, the largest decrease in the multiple jobholding rate was -0.8 percentage points from 1999 to 2000, and the largest increase was 1.0 percentage point from 2005 to 2006. The most recent rate, 7.0 percent in 2009, was up by 0.4 percent from 2008.

How does New Hampshire compare to other New England States?

New Hampshire's 7.0 percent multiple jobholding rate placed it fourth-highest in New England in

2009. New Hampshire's rate of multiple jobholding is typically in the middle of the pack when compared to the rest of New England. In ten of the eleven years between 1999 - 2009, New Hampshire has had either the third- or fourth-highest multiple jobholding rate in New England. Only once did it place fifth-highest, with a 6.3 percent rate in 2000. Since at least 1999 Vermont has had the highest rate of multiple jobholding in the region, usually followed by Maine.

What was the range in rates for multiple jobholding found in the United States in 2009?

South Dakota, at 10.3 percent, experienced the highest multiple jobholding rate among the states in 2009. North Dakota and Nebraska followed at 9.8 percent and 9.5 percent, respectively.

Share of Multiple Jobholders

Those three states were all in the West North Central division of the Midwest Census region. At 8.0 percent, the West North Central area (Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota) was the only Census division with a higher multiple jobholding rate than New England's 6.4 percent. States in the West North Central division have a higher concentration of agricultural employment. This likely influences multiple jobholding rates since self-employed workers (e.g., farmers) who also have a wage or salary job, or unpaid family workers (on the farm) who also have a wage or salary job, would be included.

The state with the lowest rate in 2009 was Nevada at 3.7 percent, followed by Arizona at 3.8 percent, and Louisiana at 3.9 percent.

How does multiple jobholding in New Hampshire compared to the United States? Over the period of 1999 - 2009, New Hampshire's rate was consistently higher than the national multiple jobholding rate. During those years, the United States rate never rose above 5.8 percent, the rate in 1999, and it has been level at 5.2 percent since 2006. New Hampshire, on the other hand, never reached lower than 6.2 percent, which occurred in 2003.

What are characteristics of multiple jobholders in the U.S.? Nationally, 7.3 million workers held multiple jobs in 2009.¹ Among women aged 16 years and older, 5.6 percent were multiple jobholders, and among men 16 years and older, 4.8 percent held more than one job. Women ages 20 to 24 years had the largest share of multiple jobholders, with 6.4 per-

cent of this segment of the workforce working more than one job, while women aged 65 years and over held the smallest share, 3.3 percent. The share of multiple jobholders among men aged 65 years and over was the only age demographic group to exceed that of women, with 3.6 percent.

Marital status appears to be a significant factor in the decision to hold more than one job, particularly for women. Among women who were widowed, divorced, or separated, 6.5 percent had multiple jobs, while among single, never married women, 6.2 percent worked more than one job. Among married women with a spouse present, 5.1 percent were multiple jobholders. For men, shares were highest among married men with a spouse present, with 5.0 percent of these workers holding multiple jobs.

Anthony Scott

New Hampshire Occupational Employment & Wages 2010

According to the latest Occupational Employment Statistics estimates, New Hampshire workers earned, on average, \$21.36 per hour in June 2010. Average wages ranged from \$10.77 per hour for workers in Food Preparation and Serving-Related occupations to \$50.71 per hour for workers in Management occupations.

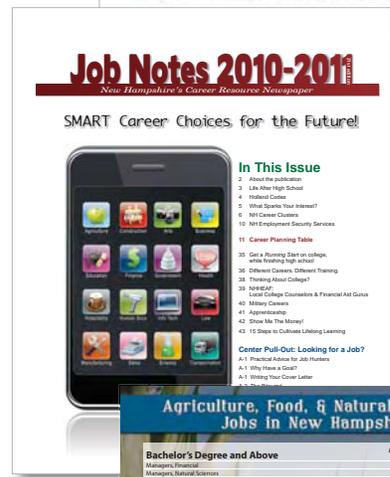

Based on a semi-annual survey, employment and wage rates for workers in all nonfarm industries are collected and estimated for over 600 different occupations. The publication includes employment estimates and entry level, average, median, and experienced wage rates for occupations statewide and in 16 sub-state regions.

Career Resources Updated

Job Notes 2010 – 2011

A career planning resource for people of all ages, this tabloid newspaper has a variety of information on career decision-making, the job search process, educational opportunities, and more.

Career Posters

Organized by US DOE Career Clusters, each poster lists occupations in the cluster by level of education, along with average annual job openings and the average annual wage. (available online only)

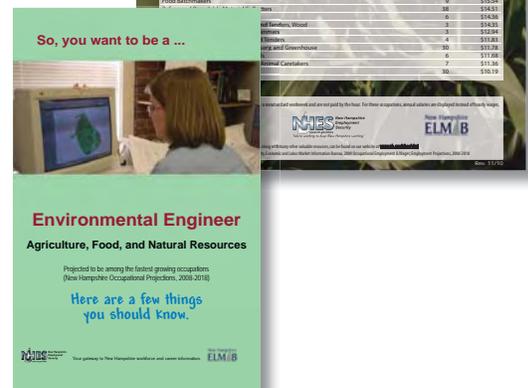

“So, you want to be a” Brochures

Highlighting occupations expected to grow the fastest and those with the most annual openings, these brochures provide a condensed profile of an occupation. Each brochure has information on tasks, average hourly wage, average annual job openings, training and education needs, basic skills requirements, working conditions, and an average work week.

Current month is Preliminary
Past months are Revised

September 2010

New Hampshire unemployment and labor force estimates are calculated using a regression model which depends on Current Population Survey (CPS) estimates. Labor Market Area estimates are calculated using the Bureau of Labor Statistics "Handbook Method" and then adjusted to the State levels.

Monthly Analysis of Current Employment Statistics (CES)

Seasonally Adjusted

New Hampshire’s preliminary seasonally adjusted employment increased by 5,300 jobs, over-the-month. Employment in government (supersector 90) rose by 3,200 jobs from August to September. This growth was driven by local government, up 4,000 jobs. Much of this gain can be attributed to the start of a new school year. Over-the-month, employers in private education and health services (supersector 65) added 1,400 jobs. Employers in other services (supersector 80) reported 700 more jobs than were reported in August. Employment in construction (supersector 20) expanded by 400 jobs, over-the-month.

From August to September trade, transportation, and utilities (supersector 40) lost 400 jobs. Employment in financial activities (supersector 55) decreased by 300 jobs, over-the-month. Employers in leisure and hospitality (supersector 70) posted a slight decline in employment, down 100 jobs from August to September.

Preliminary seasonally adjusted employment expanded by 17,100 jobs, over-the-year, with all but 2,300 in

the private sector. Private education and health services added 3,500 jobs from September 2009 to September 2010. This growth was powered by health care and social assistance, up 2,500 jobs. Employers in other services posted an over-the-year increase of 2,900 jobs. From September 2009 to September 2010, trade, transportation, and utilities grew by 2,600 jobs. Professional and business services and government each gained 2,300 jobs, over-the-year. The workforce in construction expanded 1,800 jobs, over-the-year. Leisure and hospitality reported 1,600 more jobs than were reported in September 2009. Employers in manufacturing experienced an over-the-year jump in employment, up 900 jobs.

The only supersector to post an over-the-year loss was financial activities, down 900 jobs. Over half of this drop was driven by real estate and rental and leasing (sector 53), down 500 jobs.

Unadjusted

Over-the-month, preliminary not seasonally adjusted employment increased by 7,900 jobs. Government

(supersector 90) drove this growth, adding 14,800 jobs from August to September. Local government claimed the bulk of this expansion, up 12,900 jobs. Much of this can be attributed to the start of a new school year. During this same time frame, state government added 2,400 jobs, also primarily connected to a new academic year. Over-the-month, employment in private education and health services (supersector 65) grew by 2,200 jobs.

Employment in leisure and hospitality (supersector 70) decreased by 6,900 jobs from August to September. Employers in trade, transportation, and utilities (supersector 40) reduced their workforces by 1,400 jobs, over-the-month. From August to September, employment in financial activities (supersector 55) dropped by 600 jobs.

Preliminary not seasonally adjusted employment grew over-the-year, up 18,100 jobs, including 15,400 jobs in the private sector. From September 2009 to September 2010 trade transportation, and utilities increased by 3,200 jobs. Over-the-year, private education and health services added 3,000 jobs. Employment in other services rose by 2,800 jobs from September 2009 to September 2010. Government experienced an increase of 2,700 jobs, over-the-year. Employers in professional and business services gained 2,600 jobs from September 2009 to September 2010. Over-the-year, leisure and hospitality added 1,600 jobs. Employers in construction added 1,600 jobs from September 2009 to September 2010. Manufacturing gained 1,200 jobs, over-the-year.

The only supersector that posted an over-the-year loss was financial activities, down 700 jobs.
