New Hampshire Long-term Employment Projections — 2016 to 2026

Projections Highlights

Over the ten-year period from 2016 to 2026, total employment in New Hampshire is expected to grow by 6.1 percent. Estimated employment is expected to increase from 694,699 to 736,803, a gain of 42,104 jobs. Annually, 82,166 job openings are projected, from a combination of new job growth, labor force exits, and occupational transfers.¹

- Projected employment gains by industry sector will be the highest in the *Healthcare and social assistance* sector, an increase of 14,189 jobs by 2026. This sector is expected to contribute roughly one-third of total new jobs. The *Accommodation and food services* sector is projected to add 4,854 jobs, and the *Professional, Scientific, and technical services* sector is projected to add 4,634 jobs over the decade.
- The *Healthcare and social assistance* sector is expected to grow the fastest, with employment increasing by 15.7 percent by 2026; followed by the *Professional, Scientific, and technical services* sector, with an employment gain of 13.7 percent.
- Employment in all but one of the 22 major occupational groups is projected to increase, led by *Healthcare practitioners and technical occupations*, adding 5,700 jobs, and *Food preparation and serving related occupations*, adding 5,300 jobs between 2016 and 2026. The only group projected to decline is *Production Occupations*, with 2,500 fewer jobs.
- *Personal care and service occupations* are projected to be the fastest-growing major occupational group, with employment gains of 17.6 percent overall. *Healthcare support occupations* are also expected to grow rapidly, at 15.5 percent.
- The largest number of annual job openings is expected for *Sales and related occupations* and *Office and administrative support occupations*. About 12,500 annual job openings are expected for each of these major occupational groups.
- Occupations with the largest number of projected annual job openings are *Cashiers* (4,100 openings), *Retail salespersons* (3,900 openings), and *Combined food preparation and serving workers* (2,700 openings).

_

¹ See page 4 for a detailed explanation of labor force exits and occupational transfers.

- Personal care aides help people with disabilities, the elderly, or convalescents with activities of
 daily living, either in their own home or in a care facility. About eight out of every ten of these
 workers are employed in the Healthcare and social assistance sector. Others are employed by
 Private households, or are Self-employed.
- Combined food preparation and serving workers perform both food preparation duties and serve customers. About two-thirds of these workers are employed in Food services and drinking places, but may also work in Food and beverage stores, Amusement, gambling, and recreation, Elementary and secondary schools, Food manufacturing, or Hospitals.
- A growing *Healthcare and social assistance* sector will fuel high demand for *Registered nurses*. While over half of *Registered nurses* are employed in *Hospitals*, they also are in demand by *Ambulatory healthcare services*, *Nursing and residential care facilities*, *Educational services*, *Insurance carriers*, and *Government*.

- The four occupations expected to grow the fastest all provide personal or health care services. The majority of these workers are employed in the *Healthcare and social assistance* industry sector. Employment in each of these four occupations is projected to increase by over thirty percent between 2016 and 2026.
- Nonfarm animal caretakers, who feed, water, groom, exercise, bathe, and care for animals
 other than farm animals, are expected to grow by just under thirty percent between 2016
 and 2026. These workers may be employed in settings such as pet stores, animal shelters,
 kennels, zoos, stables, veterinary clinics, or aquariums.
- Software applications developers and Information security analysts are each projected to grow by more than 25 percent during the decade, as new applications on smartphones, tablets, and online services are developed. With this increase in online activity, the need for information security will also be in demand.

Projections Methodology: Annual Job Openings

After years of research, the U.S. Bureau of Labor Statistics has developed a new methodology for estimating annual job openings that better reflects the changing workforce in the twenty-first century. This new methodology changes the way job openings are estimated, recognizing that an individual may have several career changes throughout the course of their working life.

At first glance, users familiar with employment projections will notice that the latest values for projected openings are significantly higher than in past projections. The new methodology provides a better estimate of the labor market dynamics.

National separation rates, calculated by the U.S. Bureau of Labor Statistics, are used to estimate separations on a statewide basis, which are the number of workers in New Hampshire projected to leave an occupation to retire or some other reason, or to transfer to a different occupation. Separation rates are used to estimates the number of workers who permanently leave an occupation and need to be replaced by a new entrant into the occupation. This is not a measure of movement within an occupation, referred to as "turnover." An example of turnover is a *Cashier* leaving one retail establishment to take a job at another. The Bureau of Labor Statistics defines *permanent* as exiting the labor force for four consecutive months or transferring to another occupational group within the Standard Occupational Classification (SOC) system.

Labor force **exits** are defined as workers that leave the workforce entirely to go to school, start a family, or retire, for example. Occupational **transfers** are defined as workers that leave one occupation to become employed in some other occupation in a different occupational group, due to promotion or simply a job change.

Total projected annual job openings are the combination of labor force exits, occupational transfers, and openings created from growth. As a worker departs a position, whether to exit the labor force or to change occupations, a job opening is created. Job openings are also created from new growth, which is simply the annualized difference between base year employment and projected employment. Growth occurs when there is demand for workers in an occupation, often due to increased demand for products and services produced by the industries that employ those workers. Growth for an occupation can be negative, such as when changes in technology result in fewer workers needed to achieve the same level of labor productivity.

There is no specific connection between occupational employment growth and the number of workers leaving an occupation.² On the other hand, the number of job openings projected for a specific occupation is correlated with the number of individuals currently employed in the

Occupational Separations Methodology Frequently Asked Questions. U.S. Bureau of Labor Statistics. www.bls.gov/emp/ep_separations_faqs.htm

occupation. Occupations with higher estimated employment usually have a large number of annual job openings, while occupations with fewer workers are expected to have a much lower number of annual job openings.

Some of the advantages of the new methodology are that it makes a distinction between the volume of workers who will be exiting the workforce as the baby boomer generation ages into retirement and workers who change careers and move from one occupation to another.

Projected job openings for an occupation should not be viewed as a precise estimate of the number of expected openings but more as a general guide to the magnitude of job openings in comparison to other occupations. In addition, long–term projections for prior periods should not be used as a comparison to determine how occupational demand has changed over time.

Occupational Outlook Indicators

The occupational projections tables (starting on page 8) include a symbol that indicates the expected employment prospects for an occupation. The outlook is based on two factors: the projected growth rate and the projected number of openings for the occupation from 2016 to 2026.

- **Very Favorable.** Occupations that combine a high rate of growth and a large number of annual job openings are described as *very favorable*. These occupations are expected to provide the best employment opportunities through 2026.
- **Favorable.** Occupations that have a low rate of growth combined with a very high or high number of job openings area considered *favorable*. An occupation may also be *favorable* if the growth rate is better than average but the number of job openings is below average; or the growth rate is average and the number of job openings is average or better.
- Less Favorable. Occupations considered *less favorable* have better expected opportunities than the least favorable category, either because of a higher growth rate or a larger number of projected job openings.
- ▶ **Not Favorable.** Occupations identified as *not favorable* have a negative rate of growth and few annual openings per year. These occupations are not expected to be significant sources of jobs through 2026.

Entry-Level Education, Work Experience, and Post-Hire Training

For each occupation, the typical education, related work experience, and post-hire training expected of entry-level workers have been identified. The first two categories show the educational attainment and work experience in a related occupation expected before an individual is employed. The last category refers to on-the-job training, apprenticeship, internship, or residency typically conducted after employment.

Educational Attainment

These categories indicate the typical level of education most workers need for an entry-level position in the occupation:

- Doctoral (PhD) or professional degree (i.e., MD, DD, JD, DC)
- Master's degree (i.e., MA, MS, MEd)
- Bachelor's degree (i.e., BS, BA, BFA)
- Associate's degree (i.e., AS, AA)
- Postsecondary non-degree award (program completion, i.e., CNA, cosmetologist)
- Some college, no degree
- High school diploma or equivalent (GED)
- No formal educational credential

Work Experience

Some occupations require work experience in a related occupation as an entry-level qualification. Frequently, these occupations are managerial or supervisory positions, where the worker performs the same job tasks as the workers under their supervision, such as *Retail supervisors*, *Marketing managers*, or *Construction managers*. Non-supervisory workers may also have an experience requirement, such as *Restaurant cooks* or *Industrial truck and tractor operators*. The work experience categories are: *less than five years, five years or more*, or *none*.

Post-Hire Training

This category identifies additional training or preparation typically needed to gain competency in the occupation once the worker is employed. This type of training is occupation-specific, not job-specific, meaning skills can be transferred to another job in the same occupation. The job training categories are:

- Internship or residency
- Apprenticeship
- Long-term on-the-job training (over 12 months)
- Moderate-term on-the-job training (one to 12 months)
- Short-term on-the-job training (one month or less of informal training)
- None
